# Booked Capacity – November 2026 Update

## MAIN ASSUMPTIONS

TTPC
A SeaCorridor Company

TransMed

The technical transmission capacity offered at the Oued Saf Saf Entry Point is equal to approx. 100 MCcm/d and it is functional to cover (i) transport requests from our Shippers, as well as (ii) Tunisian gas demand

The above-mentioned capacity is the one offered in standard operating conditions. During the year it could be reduced due to scheduled maintenance activities. Additional slight variations could be observed because of exogenous phenomena (e.g. but not limited to climatic factors).

*Please note:*
*The capacity booked [definitive] takes into account any capacity product including (i) the weekly and day ahead products (equivalent average monthly value) and the (ii) the SCS service (equivalent average monthly value) but does not include (iii) the capacity allocated to STEG.*

*The capacity booked [provisional] does not consider (i), (ii) and (iii).*
